Wifi Hotspots

Create a Wifi Hotspot!

What is a WiFi Hotspot?

A WiFi hotspot is defined as any location in which 802.11 (wireless) technology both exists and is available for use to consumers to access the Internet. In some cases the wireless access is free, and in others, wireless carriers charge for WiFi usage.

To create your own Wifi Hotspot is simple, at Club Wifi we can supply you with all the necessary routers and security to get your Wifi Hotspot up and running.

We supply you with a preconfigured wireless router that controls network security – it allows users access to the internet –but no network sharing – most importantly. Your own unique portal page is accessed showing a login screen and free links to web sites of your choice. Wifi Hotspots are becoming more popular with travellers, both business and pleasure, allowing users to connect to the internet to do all sorts of things.

If you are thinking about installing a Wifi Hotspot and would like Club Wifi to assist, then please call us on the numbers below, or, for an onsite demonstration or more detailed information – call Club Wifi on **05602 813755** or visit our website – **www.clubwifi.co.uk**

** - you will need a broadband connection. There is an annual charge of £195.00 + Vat for the server access licence.*
